

Hello, I'm

Michael Pardo

I write software, speak at conferences, and author open source developer tools.

EXPERIENCE

Instacart

Senior Software Engineer

December 2018 — Present

Currently, I work on the Platform team at Instacart. My responsibilities include managing our technical roadmap, supporting engineers via tooling, and liaising with our feature teams.

Revl

Senior Software Engineer

October 2017 — October 2018

At Revl, I was responsible for leading the development team for our Android product. This included a lot of mentorship, by which I was able to see my team learn and grow their skills.

Trove

Senior Software Engineer

May 2014 — October 2017

At Trove, I was responsible for leading the development team for our Android product. As an early member of a start-up, I was able to express myself creatively with input on product and design.

Mobiata / Expedia

Senior Software Engineer

August 2010 — May 2014

I was the second of two pre-acquisition Android developers at Mobiata. I was responsible for the FlightBoard and HomeAway apps. Post-acquisition, our team of two built the Expedia Bookings app. In addition to writing code, I also had the opportunity to interact with the community while manning booths at Mobile World Congress and Google I/O.

SKILLS

Kotlin

Since late-2014, I've been using and advocating for Kotlin. I am active in the community, speaking frequently at conferences and releasing open source developer tools.

Android

I've been using Android since the beta. On opening day of the App Store, I released "Caller ID by Whitepages". Over the last ten years I've continued to release featured and award winning apps downloaded by millions of users.

Open Source

For the last ten years I have been publishing open source software, building skills beyond just writing code. My developer libraries have earned thousands of stars on Github.

Public Speaking

I love teaching and sharing ideas; public speaking is one of the primary ways I am able to do this. I have spoken at many large conferences across the US.

Technical Writing

A key component of open source is writing technical documentation. Writing prose is a skill I have been able to apply to my work, and readers tend to enjoy my writing voice.
